The growing demand in the Contract field, the change in the way of life and working, call for larger and larger tables. To meet this request, the Mdf Italia Project and Research Team have conceived a simple and universal system which allows to manufacture four- legged extra large tables avoiding the bending stress of the frame over a certain dimension (max length 300 cm.) The adjustment of the tensioning device-a patent from MDF Italia-assures a perfect flatness of the worktop and guarantees a high capacity load in the frame (patent pending)
